IT 110 MIDTERM PROJECT RUBRICS AND INSTRUCTION

Criteria	Excellent (5)	Good (4)	Fair (3)	Poor(2)	Very Poor(1)	No Evidence(0)	Total Points
Project Setup - CO1 (5 points)	Well-organized, roles clearly defined, and project scope fully established. (5 points)	Is organized with minor role or scope issues. (4 points)	Has unclear roles or incomplete project scope. (3 points)	Lacks organization; project setup is unclear or incomplete. (2 points)	Shows very little organization; project setup is largely incomplete, unclear, or missing. (1 point)	No evidence of project setup was provided	/5
Overall Website - CO1 (30 points)	The website is visually appealing, fully functional, responsive, and includes all required features. (30 points)	The website is functional with most features, but has minor design or usability issues. (20 points)	The website is partially functional; design or features are incomplete. (10 points)	The website has major issues, lacks functionality, or is poorly designed. (6 points)	The website is largely non-functional, incomplete, or very poorly designed. (3 points)	No Website	/30
JavaScript API Application - CO2 (40 points)	API integration works seamlessly, with efficient code, clear documentation, and added features beyond requirements. (40 points)	API integration works with minor bugs; code is functional and mostly efficient. (30 points)	API integration is partially working; code has several errors or missing features. (20 points)	API integration is incomplete or non-functional. (15 points)	API integration is mostly non-functional, with major errors or missing components. (7 points)	No JavaScript API Integration	/40
Final Submission - CO1 & CO2 (10 points)	Submission is complete, well-documented, and follows all instructions. (10 points)	Submission is complete with minor issues in documentation or formatting. (8 points)	Submission is incomplete or lacks some required elements. (5 points)	Submission is mostly missing or poorly prepared. (3 points)	Submission is incomplete, poorly prepared, or missing key components. (1 point)	No final Submission	/10
Presentation - CO1 & CO2 (15 points)	Clear, confident, and engaging presentation; meets deadlines; visuals and delivery are professional. (15 points)	Presentation is clear and organized with minor delivery or visual issues. (12 points)	Presentation is somewhat clear but lacks confidence, organization, or engaging delivery. (8 points)	Presentation is unclear, unprepared, or fails to meet requirements. (5 points)	Presentation is poorly prepared, unclear, or fails to meet key requirements. (2 points)	No Presentation	/15

Instructions: Please read each step carefully

Objective: You or your group will design, build, and present a functional web application that interacts with a public API. This project will test your skills in HTML, CSS,
JavaScript (including `fetch` or `async/await`), and your ability to work as a team or independently.

1. **Individual or a max group of 3 members.**
2. **Choose Your Project:**
   . Assign Roles: Decide who will be primarily responsible for:
   - HTML Structure & Semantics
   - CSS Styling & Layout
   - JavaScript Logic & API Integration
   - Project Management & Documentation (Note: All members must contribute to code.)
3. **Plan Your API: Research and select a free API for your chosen application.**
   Example API you can utilize in your application is NASA API:https://api.nasa.gov
4. **Application Choices:**
   - Currency Converter Application
   - Dictionary Application
   - Random Quote Generator
   - QR Code Scanner or Reader (Note: This requires a camera API, which is more advanced)
   - Weather Tracker (Location-Based) Application
   - Language Translator App
   - Others but specify it in your presentation
5. **Before building your main app, create a single HTML page that serves as your Group Portfolio.**
   Requirements:
   - A clear title and introduction to your team.
   - A section describing the project you chose and its main goal.
   - Individual Profile for each team member. Each profile should include:
     - Name
     - Photo
     - Short bio or role in the project

   A prominent link or navigation button that leads to your main JavaScript API Application.
6. **Build a single-page application (SPA) for your chosen category.**
   Functional Requirements:
   - User Interface (UI): Build a clean, intuitive interface with HTML and CSS.
     - Must include appropriate input fields (e.g., amount and currencies to convert, a word to define, a button to generate a quote).
     - Must clearly display the results fetched from the API.
   - API Integration (JavaScript):
     - Use the `fetch()` API or `async/await` to make calls to your chosen external API.
     - Successfully retrieve data from the API based on user input.
     - Handle the APIs response and parse the JSON data correctly.
     - Dynamically update the DOM to display the results to the user.
   - Error Handling:
     - Your app must gracefully handle errors (e.g. no internet connection, API request fails, user input error). Display a user-friendly message like
       "Could not fetch data. Please try again."
   - Technical Requirements:
     - All code must be your own. You may use online resources for learning, but not copy solutions.

7. **Final Submission and Presentation (Github)**
   In your Github this files should be found:
   - index.html (Your Portfolio Homepage)
   - app.html (Your main application page)
   - styles.css (Your styles)
   - script.js (Your JavaScript)
   - Any other assets (images, etc.)
   - A README.txt file with:
     - Group Name and Members
     - The name of the API you used and a link to its documentation.
     - Any special instructions to run the app (if needed).

   Deploy your website (Optional)
